Technical Skills

Languages: Python, SQL, JavaScript, HTML, CSS
Data & ML: Spark, Databricks, PyTorch, Random Forest, GLM, PCA, CNNs, SHAP, Feature Engineering
Analytics & BI: Tableau, Power BI, Bloomberg
Frameworks: Django, React, Vue, Bootstrap
Databases & Cloud: BigQuery, SQL Server **,**Azure Databricks, Delta Lake, Apache Spark
Methods: Regression, Classification, Hypothesis Testing, Sampling, Imputation

Experience

Senior Data Engineer |Markel Corporation February 2023-ongoing

- Productionalized an AI model for legal invoice classification by refactoring Lex API orchestration into scalable **Spark pipelines in the Databricks Lakehouse**, leveraging **Delta Lake and Databricks Workflows** to automate ingestion, feature processing, and inference pipelines; improved SLA reliability and enabled **$30M in cost savings by identifying panel vs. non-panel law firms.**
- Designed and deployed scalable **end-to-end machine learning pipelines** in Databricks using Python, Spark, and SQL, implementing feature engineering, model training, validation, and SHAP-based interpretability across large claims and financial datasets; identified key claim characteristics and examiner decision patterns acting as **cost multipliers**, improving prediction accuracy **15%** and enabling operational changes that **reduced loss ratio by 10%.**
- Architected distributed **Spark ETL pipelines in the Databricks Lakehouse using Delta Lake**, processing multi-million-row insurance datasets to support large-scale analytics and machine learning workloads; reduced data preparation time **30%** and accelerated **end-to-end ML deployment cycles**.
- Built data pipelines enabling **AI-powered summarization of adjuster file notes**, integrating RPA and API workflows to ingest unstructured claims text into **Azure Data Lake and Delta Lake**, unlocking previously siloed data for **NLP modeling, analytics, and machine learning in the Databricks Lakehouse**.
- Partnered with claims, legal, and analytics leadership to translate complex operational questions into **machine learning and data engineering solutions**, defining modeling strategies to analyze **claims severity, operational performance, and cost drivers to support data-driven decision making.**
- Mentored engineers and analysts on **Spark-based feature engineering, Databricks notebook development, and production ML pipelines**, enabling three machine learning models—including an **automated claims auto-pay system**—to reach production and eliminate **hundreds of manual claim review hours**.

Senior Business Intelligence Analyst| Markel Corporation August 2022- February 2023

- Automated enterprise reporting workflows by developing Smartsheet-based reporting portals, eliminating manual processes and delivering $50K in annual cost savings.
- Architected automated reporting pipelines using Tableau Prep, improving data accuracy and reducing manual preparation time for recurring executive reporting.
- Drove analytics initiatives quantifying productivity and cycle time, uncovering performance drivers that informed cost optimization strategies.

Data Analyst Team Lead| Correlation One , October 2021-March 2022

- Created a detailed 17-week project plan with biweekly meetings to assign deliverables and ensure the timeline remains on track. Received mentorship and guidance from an industry data scientist.
- Selected to participate in a 17-week data science fellowship (1% acceptance rate) with a learning facilitated through real-world data science business cases.
- Led a team of four to build a random forest regression model toward predicting Real Estate Income Trust's Index Value based on indicators ranging from Consumer Sentiment, National Housing and Rent Prices, and the Kansas City Federal Reserve Labor Market Conditions Indicators and their Financial Stress Index.

Education

University of Colorado-Boulder| Boulder, CO **Expected May 2027**
Master of Data Science

Georgia State University | Atlanta, GA
Bachelor of Science in Economics May 2022
